PROFILE

Data analyst and full-stack developer focused on Data, AI and Business Intelligence, with specialised training in data analysis and artificial intelligence and a strong practical orientation. I have built end-to-end projects combining Python, SQL, Power BI, Machine Learning, APIs, LLMs and automation, from data preparation to models, services and applications.

I bring analytical capability, product vision and a particular skill for finding uses for AI, understanding the strengths and limits of different models and tools, and orchestrating them effectively. I design architectures and workflows that turn complex ideas into functional, well-structured and well-documented solutions. In my free time I follow AI news and experiment with AI as my main hobby.

KEY SKILLS

- **Data and BI:** cleaning, transformation and analysis with SQL and Python; Power BI, dashboards, KPIs, reporting, data quality and governance.
- **Applied AI and solution design:** use-case identification, LLMs, RAG, agents, model selection, APIs and automation.
- **Data engineering and Machine Learning:** hands-on experience building data pipelines, forecasting models and anomaly-detection systems, including projects built with PySpark, Databricks and MLflow.
- **Product and development:** taking an idea from first definition to a working solution, with APIs, FastAPI, JavaScript and TypeScript, Python, React, Vue and Next.js.
- **Way of working:** product vision, analytical rigour, technical documentation, fast learning and a particular skill for structuring complex problems before tackling them.

SELECTED PROJECTS

RenewableOps AI — Data Engineering, ML & MLOps
Built a platform to analyse the operation of several solar and wind installations, combining official data with simulated operational data to generate production forecasts and detect possible anomalies. Planned the project end to end: data preparation, model training and evaluation, API, dashboard, automation and monitoring. Prepared the architecture to work with Databricks, keeping clearly separated the parts that were actually executed from the cloud integrations that are not deployed.

Python, PySpark, scikit-learn, MLflow, Parquet, FastAPI, Next.js, Docker, Databricks · Demo · GitHub

Forjadata — Data quality, governance and enterprise data management
Developed a platform to turn information from different sources into reliable master data, detecting duplicates, normalising information and keeping traceability over changes and decisions. Includes human review and approval processes, quality rules, audit trails and integrations prepared for enterprise environments such as Azure and SAP, with the connections that need external infrastructure or credentials kept simulated.

Vue 3, TypeScript, Azure Functions, Prisma/PostgreSQL, MDM, Data Quality, Azure OpenAI, SAP OData · Demo · GitHub

Riskmap — AI and geopolitical risk analysis
Built a platform to gather information from dozens of sources and turn scattered news and data into a clearer picture of conflicts, disasters and other international risks. Designed a process that uses AI to classify and contextualise the information, combines it with geographic and visual data, and places events on a map to make analysis easier.

Python, APIs, LLMs, RAG, computer vision, YOLO, Sentinel Hub and geospatial data · Demo · GitHub

LeadFlow 360 — Intelligent lead capture and management
Designed a flow that receives, validates, scores and distributes leads automatically with n8n, connecting HubSpot, Gmail, Slack and Google Sheets, with error handling, retries and traceability.

n8n, APIs, webhooks, HubSpot, Gmail, Slack, Google Sheets, Cloudflare Workers/D1, AI agents · Demo · GitHub

Madrid Aire — Air quality analytics and forecasting
Integrated and prepared public data from monitoring stations and pollutants into a web platform with KPIs, maps, filters and interactive visualisations. Added a 24-hour NO2 forecast and an experience aimed at comparing stations and reading the results clearly.

Python, APIs, data cleaning, geospatial analysis, forecasting, dashboards, Vercel · Demo

OpenClaw / Hermes Agent — AI agents and automation
Designed a multi-agent system to automate tasks and coordinate technical workflows, integrating VS Code, Telegram, WhatsApp, APIs and local and cloud models. Implemented model routing, RAG, documentation and quality controls aimed at reducing manual work and improving the traceability of processes.

LLMs, RAG, APIs, agents, model routing, workflow automation, local/cloud models, VS Code

PROFESSIONAL EXPERIENCE

Lead Sound Technician · 3D Artist · Composer · Voice-Over 2017 – 2024
Smile and Learn · Madrid, Spain

- Worked on an educational digital product with international reach, collaborating with development, design, content and production teams to deliver consistent, high-quality work.
- Designed and optimised workflows, documented processes, ran quality checks and coordinated technical and creative deliverables with multiple dependencies.
- Diagnosed issues, prioritised tasks and turned technical needs into clear instructions for non-technical profiles, driving continuous improvement and the delivery of goals.

Audiovisual production, design and sound 2013 – 2016
Enixma Digital · Madrid, Spain

- Produced and coordinated digital content for clients, integrating editing, design, sound and technical support in projects with changing requirements and priorities.
- Managed deliverables, documentation and issue resolution, keeping to deadlines and quality and aligned with client needs.

Customer support, PlayStation technical service 2010 – 2013
Stock Uno · Madrid, Spain

- User support, first-line diagnosis of faults, and resolution or escalation of technical problems.

Video game beta tester 2009
DL Multimedia · Madrid, Spain

- Functional testing, reproduction of bugs and reporting of issues.

EDUCATION

Bootcamp in Data Analysis & Artificial Intelligence 2025
Upgrade Hub. Python, SQL, Power BI, machine learning, deep learning, NLP, computer vision, Azure ML, practice with Microsoft Fabric and end-to-end projects.

Full Stack Web Development Bootcamp 2022
Upgrade Hub. HTML, CSS, JavaScript, TypeScript, object-oriented programming, React, Angular, Node.js, databases, Git, APIs and web deployment.

Master's in Video Game Design and Development 2016 – 2017
Specialised training. Digital product design, user experience, programming, interactive narrative and multimedia production.
