AC **Alfonso Cifuentes Alonso**

Data · AI · BI · Front-end · Back-end

Hybrid profile oriented to product, data and development.

Practical experience building useful solutions from end to end.

Python · SQL · Power BI · Machine Learning · React / Next.js · APIs · Automation · Cloud

Hello,

I would like to apply to join a team where I can bring a real combination of data analysis, artificial intelligence and software development. My profile is hybrid: I move comfortably on both the analytical and the implementation side, and I particularly enjoy projects where you have to understand a problem, turn data into something useful and then turn that into a working solution.

I usually work with Python, SQL, Power BI, JavaScript/TypeScript, React, Next.js, APIs and cloud tools. On that basis I have built projects in analysis, automation, machine learning and complete web applications, taking care of both the treatment and modelling of data and the logic, the interface and the deployment.

I also come from a fairly varied professional background, which has helped me communicate well with technical and non-technical people, prioritise what matters and keep a very practical focus. I am not interested only in something working: I want it to be useful, clear, maintainable and genuinely valuable.

I am now looking for an opportunity where I can keep growing and take on responsibility, bringing that versatility to roles in Data, Business Intelligence, AI or front-end/back-end development. I am available immediately, and I would be happy to expand on any of this in an interview.

Kind regards,

Alfonso Cifuentes Alonso
